

PROTIMS TERMINAL INFORMATION MANAGEMENT SYSTEM

ProTims is a complete terminal information management system that significantly reduces costs and can be used to deploy new revenue generating payment applications. Applications and parameters can be securely downloaded to any PAX POS terminal, located anywhere, with scalability to very large installations. Interrupted downloads can be easily resumed from the last point of failure. In addition, the POS transaction module remotely captures download transaction history and stores the data in a flexible and easy to use centralized database. The POS auto update module automates the delivery of system updates during off-peak hours, minimizing the impact to your business, and the remote diagnostic utility identifies and resolves terminal issues eliminating the need for device returns.

Key Features
Remote terminal deployment
Remote application downloads in as little as two (2) minutes
Remote application upgrade and terminal parameter download
Remote terminal diagnosis
Flexible reporting
Unlimited concurrent terminal download

Payment Platforms For Long Term Growth
