

PAXSTORE

NORTH AMERICA

All PAXSTORE users utilizing the public Marketplace now receive **5 free Remote Key Injections (RKI) *each month** through **12/31/2021**, additional RKIs can be purchased for \$49 each.

WHAT IS REMOTE KEY INJECTION (RKI)?

RKI is the process of downloading a pin/data encryption key eliminating the need for merchants to ship their terminals to a secure certified third-party for key injection. RKI allows keys to be **remotely and securely injected** using factory installed certificates. The key then gives the terminal authority to conduct debit transactions.

Through your PAXSTORE Reseller account, you now have the ability to **securely** and **remotely push keys** for a **single terminal** or your **entire terminal suite**.

Conveniently and quickly deploy key injection from anywhere and at anytime

Faster and more secure

Instantaneously or real-time update service on terminals

No need for expensive secure rooms and equipment

If you have any questions regarding RKI, please contact support@pax.us or your sales representative.

***THE 5 FREE REMOTE KEY INJECTIONS WILL RESET THE 1st OF EVERY MONTH AND WILL NOT ROLLOVER. AFTER THE USE OF YOUR 5 FREE REMOTE KEY INJECTIONS, EACH ADDITIONAL KEY IS \$49.**

ANY PURCHASED REMOTE KEY INJECTIONS WILL ROLL OVER.
